

Solution Requirements

Date	01 October 2026
Team ID	SWTID-2026-1380
Project Name	PocketSmartAI: Your Smart Budget & Recommendation Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Allow users to create an account and log in securely so that their saved plans and preferences are available whenever they return.	Medium
2	Authorization levels	Define two roles: User (enter budget and requirements, view recommendations, save and view their own plans) and Admin (manage planning categories and recommendation data). Users can access only their own plans.	Medium

3	External interfaces	Connect to the AI recommendation component and to product and service data sources (for example shopping and event platforms or their APIs) to obtain options and prices for Home Interior, Party and Jewelry planning.	High
4	Transactions processing	Handle each planning request end to end: capture the budget and requirements, store the request, generate recommendations, check them against the budget and save the chosen plan. Purchases and bookings are completed on external platforms; PocketSmartAI does not process payments.	High
5	Reporting	Show a budget summary with estimated spending and remaining budget, a comparison of the recommended options, and a history of previously saved plans.	Medium
6	Business rules, etc.	Support three planning modules (Home Interior, Party, Jewelry). Recommendations must stay within the entered budget, or be clearly flagged if they exceed it, and must match the user's requirements, occasion and style.	High

7	Compliance to laws or regulations	Handle personal and budget data according to applicable data privacy laws (for example India's Digital Personal Data Protection Act, 2023, and GDPR where relevant). Collect only the data needed and let users delete their saved plans.	Medium
8	<i>Other</i>	Let users adjust their budget or preferences and regenerate recommendations, and keep earlier recommendations available for reference.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Recommendations are returned quickly after the user submits the budget and requirements, and screens load without noticeable delay.	Recommendations displayed in < 5 seconds; pages load in < 2 seconds
2	Scalability	The system continues to perform well as the number of users, saved plans and product data grows.	Supports up to 1,000 concurrent users without noticeable slowdown
3	Security & Data Privacy	Protect user accounts, budgets and saved plans from unauthorized access and misuse.	All traffic over HTTPS (TLS 1.2+); passwords stored hashed; users can access only their own data

4	Reliability & Availability	The service stays available, shows a clear message if the recommendation service is unavailable, and never loses saved plans.	99% uptime per month; saved plans retained after failures
5	Usability & Accessibility	The interface is simple and usable on phones and desktops, with budget entry in a few easy steps.	First recommendations within 3 steps; complies with WCAG 2.1 AA standards
6	<i>Other</i>	The modules (Home Interior, Party, Jewelry) are built separately so that new planning categories can be added later, and the app runs in common browsers.	New category added without changing existing modules; works on the latest Chrome, Edge, Firefox and Safari
